

# Ten Minute Tech

## The C Major scale

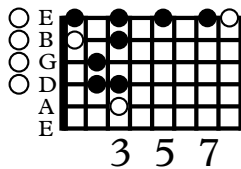

The C Major scale is often used as a starting point in music because it has no sharps or flats and is all the white notes on the piano (no black keys).

C Major (with open strings)

C Major (2 Octaves)

Now we will extend the scale to include another octave. Remember, the distance between two C's is always thought of as octave (as in "8"- octagon, octopus, etc) because if we play the scale-C D E F G A B C we have 8 notes! But no matter how many notes we play though, the distance between one C and the next C is always thought of as an octave. And we call the distance between two notes an "interval".
